

Why choose Bonton?

100% circular

Bonton encourages waste separation and the circular economy. We prove that it is possible! The Bonton Original, Circubin and Mini are made from 100% recycled plastic. At the end of their lifespan, the products are 100% recyclable again.

Social return | SROI

The Bonton is assembled and prepared for shipping by sheltered workshops. In this way we create employment for people with a labour market disadvantage.

Locally produced

The Bonton was developed and produced in the Netherlands. That's why we call it Dutch Design. This means that the Bonton only has to make a short journey to your company and we limit CO2 emissions.

Modular

The Bonton is modular and easy to expand. Is waste separation still a barrier? You can start with the two most common waste streams and expand your waste station later.

Waste Communication

By separating waste, it can be recycled more effectively. It is important to involve everyone in the organization in this change. Waste separation is a collective effort! Use waste communication to ensure everyone knows which waste goes into which Bonton bin.

A world without waste? We believe in it!

That doesn't mean that we no longer produce waste at all. It does mean that we reuse or recycle waste. But in order to really reuse these materials properly, we have to collect waste streams separately. That's why we developed Bonton: a line of circular waste collection bins to easily separate waste. The Bonton is made from 100% recycled material and is 100% recyclable at the end of its lifespan. This is how waste separation really starts.

Efficient Collection & Large Capacity

With a capacity of 70 liters, the Bonton Original offers substantial volume. Combined with its robust design, this makes the Bonton Original exceptionally suitable for environments with many users, such as offices, schools, and hospitals.

Capacity: 70 liters
Dimensions: 40 x 28 x 77 cm (LxWxH)
Weight: 10 kg
Material: 100% recycled plastic

Options

Waste communication:

Lid stickers, front stickers, and wall signs for different waste streams.

Waste bags:

Made of 100% recycled plastic.
Each waste stream has its own color.

Lid Options:

Lid with or without an opening.

Accessories:

- Bio-waste insert to halve the content and prevent fermentation.
- Coupling piece to attach the Bonton Mini to the Bonton Original.

bonton®
circubin

A real eye-catcher in a hotel lobby, office, or home kitchen, the Bonton Circubin is particularly handy and functional. This module can accommodate two inner bins, allowing you to separate two waste streams with just one Circubin. This makes it very easy to contribute to a better environment.

Capacity: 40 liters or 2 x 20 liters
Dimensions: 41 x 30 x 76 cm (LxWxH)
Weight: 4 kg
Material: 100% recycled plastic

Options

Waste communication:

Lid stickers, front stickers, and wall signs for different waste streams.

Waste bags:

Made of 100% recycled plastic.
Each waste stream has its own color.

Lid Options:

Lid with or without an opening.

Accessoires:

Coupling piece to connect multiple Circubins together.

bonton®
mini

Easily separate small amounts of waste

The Bonton Mini is the smallest waste module, but it plays a significant role in reducing residual waste. Where the capacity of the Bonton Original and Circubin is too large, the Bonton Mini provides a solution. It's ideal for small waste streams with heavy weight, such as coffee grounds, banana peels and apple cores.

Capacity: 5 liters
Dimensions: 24 x 19 x 18 cm (LxWxH)
Weight: 0,5 kg
Material: 100% recycled plastic

Dishwasher safe

Waste Communication:

Lid sticker for the organic waste stream.

Accessory:

Coupling piece to attach the Bonton Mini to the Bonton Original.
